**How to use Wonder Knitter**

<Preparations>

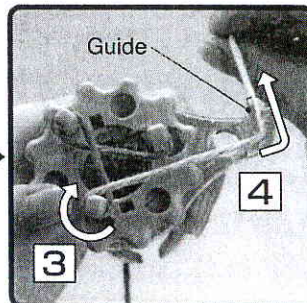

• Follow the same preparation steps for the 6-pin disk.

1. Place the end of yarn into cylinder.

2. Wrap yarn clockwise around each pin.

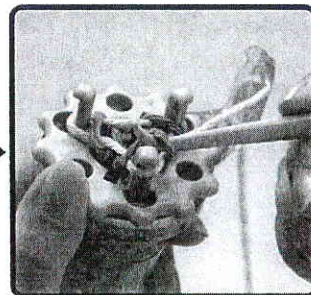

3. Set the yarn into holder guide.

During first few rounds of knitting, stitches are loose and easily come off the pins. Hold the end of yarn lightly with your finger as shown in picture.

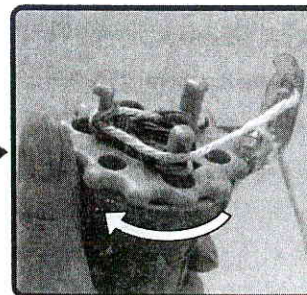

<How to knit>

1. Turn disk clockwise so that yarn from holder-guide is above the stitch on the next pin.

2. Place knitting hook from top to bottom through loop on pin. Twist knitting hook up and away from you, pulling the loop over loose yarn and onto pin.

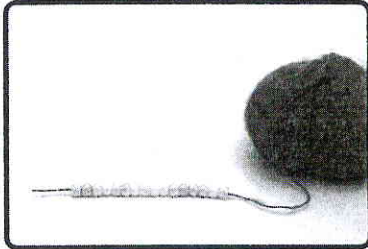

3. Turn disk clockwise by one interval between pins, and continue knitting.

While working, hold disk in place with same finger used to turn disk.

### <Adding beads on yarn>

1. Thread beads on the yarn before setting it into Wonder Knitter.

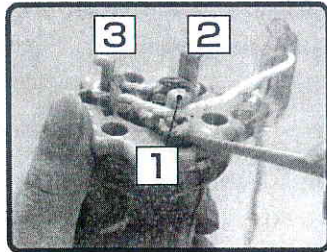

2. Set yarn as instructed above and start knitting. When you want to insert a bead, hold up yarn and slip bead between the pin you last hooked onto and the next pin.

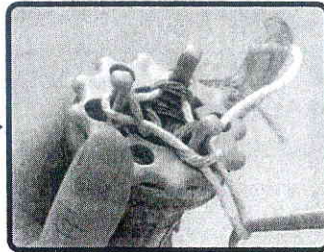

3. Illustration shows how to set yarn back in the guide pin. Continue knitting by repeating steps 2 and 3.

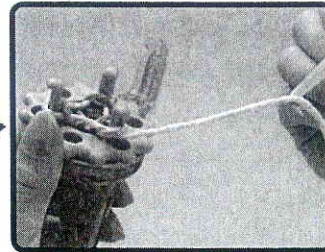

### <How to end>

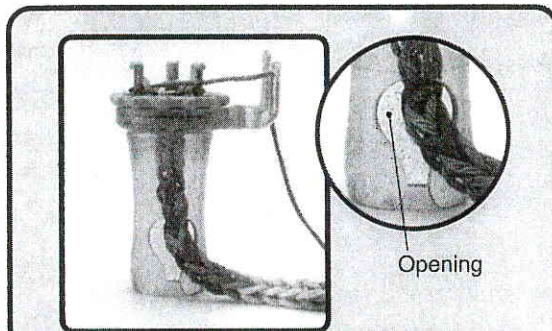

1. Place tip of the needle under the string.

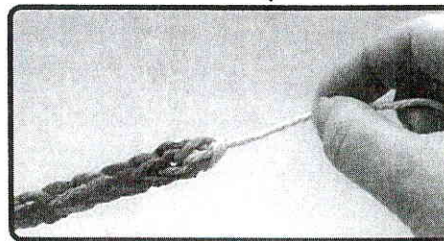

2. Hook upper string and pull it through.

Finish all in order of [1], [2] and [3].

Insert knitted material in the hole on side, and you can set the Wonder Knitter upright when you have a break while knitting.

3. Take out knitted material and pull string tight to finish.

Do not draw material through the hole while knitting.
